Projects

Minhaj365, *Large-scale enterprise software (multiple mini-modules)*

- Built each module as a full-fledged, independent software product within the larger Minhaj365 platform — complete admin-side and user-side, front-end and back-end.
- **Training Module:** Manages paid and free recorded and live courses — recorded lectures via embedded YouTube links, live lectures via in-house Zoom SDK integration (kept within the domain); issues completion certificates.
- **Markaz-e-Ilm Module:** Manages small local study circles (set up in homes, shops, madrassas, or anywhere) that complete an assigned weekly syllabus within a given time, with visit tracking to verify each Markaz.
- **Membership Module:** Handles membership form creation and submission, along with certificate generation and download.
- **HR Module:** Built specifically for the organization — employees view their attendance, full monthly reports, attendance history, and HR profile, and apply for leave; admins generate monthly/combined attendance reports, approve or reject leave requests, generate salary deduction reports, and manage all HR-related employee data.
- **Social Media Module:** Central hub displaying all social media streams and articles, responses to propaganda against the organization, aggregated news, custom DP/banner generators for events, and directories of the organization's 60+ websites and apps.
- **Blood Donation Module:** Lets users toggle donation availability, set blood type, log their last donation date, and search for available donors when blood is needed.
- **Mohsinin Module:** Encourages users to fulfill Islamic obligations (e.g., prayers) with self-reporting, and to do good deeds with family, neighbors, and others; requires 5 reference contacts (relatives/friends/neighbors) who are called to verify character, tracking and advancing the user's spiritual progress through stages.
- **Itikaf Module:** Active only during the last 10 days of Ramadan — manages Itikaf cards for the large Itikaf gathering at Itikaf City, Lahore (Minhaj-ul-Quran), and hosts lectures and videos of Dr. Tahir-ul-Qadri.
- Project is continuously updated with new features, along with ongoing error handling and debugging.

assets.minhaj.net, *Assets Management Software*

- Upgraded the existing Laravel 6 system by adding new, advanced features.
- Later upgraded the entire software to Laravel 12 with PHP 8.4.
- Currently converting the complete software into a new front-end in Next.js with the back-end fully rebuilt in Laravel 12, connected via a custom-built API within the same Laravel project — fully converted independently.

minhaj.biz, *Corporate Website*

- Built several new pages and admin-side updates.
- Made updates to the homepage and resolved multiple bugs and errors.

Khatm-ul-Bukhari, *khatmulbukhari.com*

Built the complete website with Laravel back-end and Laravel/Tailwind CSS front-end.

Standalone Tools & Calculators, *Individual Websites*

Built each tool as its own separate, standalone website: Bottleneck Calculator, Brat Generator, Calculadora de Horas, Color Blind Test, Letter Boxed Game, Overtime Calculator, PC Bottleneck Calculator, Starbucks Nutrition Calculator, and Work Hours Calculator.

Face Shape Detector AI, *faceshapedetector.ai*

Built the complete website (front-end and back-end) using Next.js.

Test de Belleza, *testdebelleza.com*

Built the complete website using Next.js, integrating Python-based AI tools: Pretty Scale AI Beauty Scanner, AI Background Remover, and Face Shape Detector.
